                                                                                        Qy
                                                                                                                                                                                                                      This sequence encodes the NOVB protein. The invention relates to CC the NOV1-NOV16 proteins, and their coding sequences. The proteins have CC Cytostatic; contraceptive; antiinflammatory; immunomodulatory; and CC cardiovascular activities. The sequences may be used in the prevention, CC diagnosis and treatment of diseases associated with inappropriate NOVX CC expression. They may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC supplement the patients own production of protein. They are used to CC produce NOVX proteins, by inserting the nucleic acid into a cell and CC culturing it to express the protein. The DNA may be used as DNA probes in assays to detect and quantitate the presence of similar DNAs in samples, CC and which patients may need restorative therapy. The NOVX protein may CC NOVX and in assays to identify modulators of NOVX expression and activity. The anti-NOVX Abs are used for detecting the cexpression and activity. The anti-NOVX Abs are used for detecting the CC presence of NOVX in samples. Disorders that may be prevented, diagnosed CC NOV7, NOV9-11 and NOV13-16 have casein kinase II phosphorylation sites C characteristic of serincy/threonine kinases, and are used to treat the epidermal growth factor (EG)-like super family and are involved in, cell are cell development, apoptosis, cell adhesion, growth cc cellular adhesion disorders (NOY6-10 are homologous to FGF-11ke) and contents on the cell development, apoptosis, cell adhesion, and are used to treat the epidermal growth factor (EG)-like and notility and protein management; and are used to treat and contents in flammatory disorders, immune disorders and cc cellular adhesion disorders (NOY6-10 are homologous to FGF-11ke).
                                                                                                                           Query Match

This sequence encodes the NOV6 protein. The invention relates to the NOV1 NOV16 proteins, and their coding sequences. The proteins have Cytostatic; contraceptive; and their coding sequences. The proteins have Cytostatic; contraceptive; and triangle sequences may be used in the prevention, Cd diagnosis and treatment of diseases associated with inappropriate NOVX CC expression. They may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of protein by expressing inactive proteins or to csupplement the patients own production of protein. They are used to CC supplement the patients own production of protein. They are used to CC supplement the express the protein. The DNA may be used as DNA probes in assays to detect and quantitate the presence of similar DNAs in samples, CC and which patients may need restorative therapy. The NOVX protein may call on the protein of antibodies (Abs) against CC NOVX and in assays to identify modulators of NOVX expression and activity. The anti-NOVX Abs and antagonist are used to down regulate considered vary depending on the NOVX protein. NOV1, NOV3, NOV5.

CC characteristic of serine/threonine kinases; and are used to treat CC characteristic of serine/threonine kinases, and are used to treat CC characteristic of serine/threonine kinases, and are used to treat characteristic of serine/threonine kinases, and are used to treat characteristic of serine/threonine kinases, and are used to treat cancers, inflammatory disorders, cell adhesion, growth cc e.g. regulation of cell development, apoptosis, cell adhesion, growth cc entered to treat cancers, inflammatory disorders, immune disorders and are used to treat cancers, and are used to treat cancers, and are used to treat cancers and are used to treat cardiomyopathy, long-OT syndrome and marfan syndrome.

CC expression. They may be used to treat disorders associated with decreased cc expression. They may be used to treat disorders associated with decreased cc expression by rectifying mutations or deletions in a patient's genome cc that affect the activity of protein by expressing inactive proteins or to cc supplement the patients own production of protein. They are used to cc produce NOVX proteins, by inserting the nucleic acid into a cell and cc culturing it to express the protein. The DNA may be used as DNA probes in casays to detect and quantitate the presence of similar DNAs in samples, cc and which patients may need restorative therapy. The NOVX protein may cc also be used as antigens in the production of antibodies (Abs) against CC NOVX and in assays to identify modulators of NOVX expression and cc expression and activity. The anti-NOVX Abs are used to down regulate cc presence of NOVX in samples. Disorders that may be prevented, diagnosed and/or treated vary depending on the NOVX protein. NOV1, NOV3, NOV5.

CC NOV7, NOV9-11 and NOV13-16 have casein kinase II phosphorylation sites characteristic of serine/threonine kinases, and are used to treat cc kinase related disorders (e.g. Peutz-Jeghers syndrome, cellular cc the epidermal growth factor (EGF) like super family and are involved in, cell development, apoptosis, cell adhesion, growth cc used to treat cancers, inflammatory disorders, immune disorders and cc cellular adhesion disorders. NOV5-10 are homologous to EGF-like cc fibrillin proteins and are used to treat cardiomyopathy, long-OT syndrome and marfan syndrome.

Cytostatic; contraceptive; antiinflammatory; immunomodulatory; and cried contraceptive; antiinflammatory; immunomodulatory; and city interest contraceptive; antiinflammatory; immunomodulatory; and contraceptive; antivities. The sequences may be used in the prevention, contraceptive; and contraceptive; and contraceptive; immunomodulatory; and contraceptive; and contraceptive; immunomodulatory; and contraceptive protein of protein sin a patient's genome contraception. They may be used to treat disorders associated with decreased expression. They are used to the patients of production of protein in a patient's genome contraception by rectifying mutations or deletions in a patient's genome contraception. They are used to contraception by inserting the nucleic acid into a cell and contraception, and protein may be used as DNA probes in the production of protein. They are used to casany to detect and quantitate the presence of similar DNAs in samples, and which patients may need restorative therapy. The NOVX protein may contraception and activity. The anti-NOVX Abs are used to down regulate expression and activity. The anti-NOVX Abs are used to down regulate contraception and activity. The anti-NOVX Abs are used for detecting the presence of NOVX in Samples. Disorders that may be prevented, diagnosed and/or treated vary depending on the NOVX protein. NOV1, NOV5, N
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                19-NOV-1999;

```
CC which represent the human ORFX open reading frames 1 to 3161. The ORFX CC sequences have activities such as: cytostatic; hepatotropic; vulnerary; CC antipsoriatic; antiparkinsonian; nootropic; neuroprotective; CC antipsoriatic; anticonvulsant; antiarthritic; immunosuppression; CC immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; CC antidiabetic; hypotensive; dermatological; immunosuppressive; CC antidiabetic; hypotensive; dermatological; immunosuppressive; CC antidiabetic; hypotensive; dermatological; antinunosuppressive; CC antidiabetic; hypotensive; dermatological; immunosuppressive; CC antidiptical; and antiparamic. The sequences can be used for determining CC the presence of or predisposition to, or preventing or treating CC pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy CC vectors. The proteins and nucleic acids may be used to treat cancers, CC graft vs host disease, cardiovascular disease, diabetes mellitus, the proteins of

           Cytostatic; contraceptive; antiinflammatory; immunomodulatory; and cardiovascular activities. The sequences may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate NOVX expression. They may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of protein by expressing inactive proteins or to supplement the patients own production of protein. They are used to produce NOVX proteins, by inserting the nucleic acid into a cell and culturing it to express the protein. The DNA may be used as DNA probes in assays to detect and quantitate the presence of similar DNAs in samples,

NOV2-3, NOV6 and NOV8 are homologous the epidermal growth factor (EGF)-like super family and are involved in e.g. regulation of cell development, appolosis, cell adhesion, growth migration, cell structure and mottlity and protein management, and are used to treat cancers, inflammatory disorders, immune disorders and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1508
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        also be used as antigens in the production of antibodies (Abs) against NOVX and in assays to identify modulators of NOVX expression and activity. The anti-NOVX Abs and antagonist are used to down regulate expression and activity. The anti-NOVX Abs are used for detecting the presence of NOVX in samples. Disorders that may be prevented, diagnosed and/or treated vary depending on the NOVX protein. NOVI, NOV3, NOV5, NOV5

ce expression by rectifying mutations or deletions in a patient's genome content the activity of protein by expressing inactive proteins or to content the patients own production of protein. They are used to content the patients own production of protein. They are used to content the patients own production of protein. They are used to content the protein activity are used to content the protein activity are used to continue Novy proteins, by inserting the nucleic acid into a cell and continue to express the protein. The DNA may be used as DNA probes in cassays to detect and quantitate the presence of similar DNAs in samples, and which patients may need restorative therapy. The NOVA protein may call and which patients may need restorative therapy. The NOVA sprotein may call into the production of antibodies (Abs) against convariant to identify modulators of NOVX expression and activity. The anti-NOVA Abs are used to down regulate correspond to and activity. The anti-NOVA Abs are used for detecting the correspond for detecting the correspond for treated vary depending on the NOVA protein. NOVI, NOV3, NOV5, Correspond to treated vary depending on the NOVA protein. NOVI, NOV3, NOV5, Correspond to treated vary depending on the NOVA protein. NOVI, NOV3, NOV5, Correspond to treated vary depending on the NOVA protein. NOVI, NOV3, NOV5, Correspond to treated vary depending on the NOVA protein. NOVI, NOV3, NOV5, Correspond to treat concers, inflammatory disorders, and are used to treat concers, inflammatory disorders, immune disorders and correspond to treat cancers, inflammatory disorders, immune disorders and correspond to treat cardiovascular disease e.g. the proteins and are used to treat cardiovascular disease e.g. the proteins and are used to treat cardiovascular disease e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence encodes the NOV10 protein. The invention relates to the NOV1-NOV16 proteins, and their coding sequences. The proteins have Cytostatic; contraceptive; antiinflammatory; immunomodulatory; and cardiovascular activities. The sequences may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate NOVX expression. They may be used to treat disorders associated with decreased
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel human polypeptides and the nucleic acids that encode them useful for preventing, diagnosing and treating e.g. cancer, inflammation and

The specification describes four hyaluronan-binding protein, known as MF-HABP, WF-HABP, OE-HABP, and BM-HABP. The polypeptides are useful for treating diseases such as proliferative conditions, metastasis, inflammation, ischemia, host defence dysfunction, immune surveilland dysfunction, arthritis, multiple sclerosis, autoimmunity, immune dysfunction and allergy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to the isolation of novel cDNA sequences which encode human secreted proteins. The cDNA sequences have been derived from a variety of human tissues. The invention also provides a method for producing proteins from these polynucleotide sequences. The proteins are useful for identifying compounds that modulate their activity and production, and the cell is also useful for identifying compounds that modulate expression of the polynucleotide sequences encoding the secreted proteins. The sequences of the invention are useful for treating diseases such as hyperproliferative disorders (e.g. cancer), immune deficiency disorders (e.g. severe combined
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            immunodeficiency (SCID)), autoimmune disorders (e.g. multiple sclerosis), blood disorders (e.g. thrombocytopaenia), inflammatory disorders (e.g. arthritis) and infectious disorders (e.g. hepatitis). The polynucleotide sequences of the invention are also useful in gene therapy. AAS52214-AAS52838 represent the CDNA sequences of the invention that encode for novel human secreted proteins.
